

UX DESIGNING SKETCH

Peacemaker Nana Kwesi Otoo
UXResearcher, August 2021.

Users don't read; they scan.

Iteration 1.

HOME SCREEN

What is it about?

The home screen contains menu buttons, notifications, profile icons.

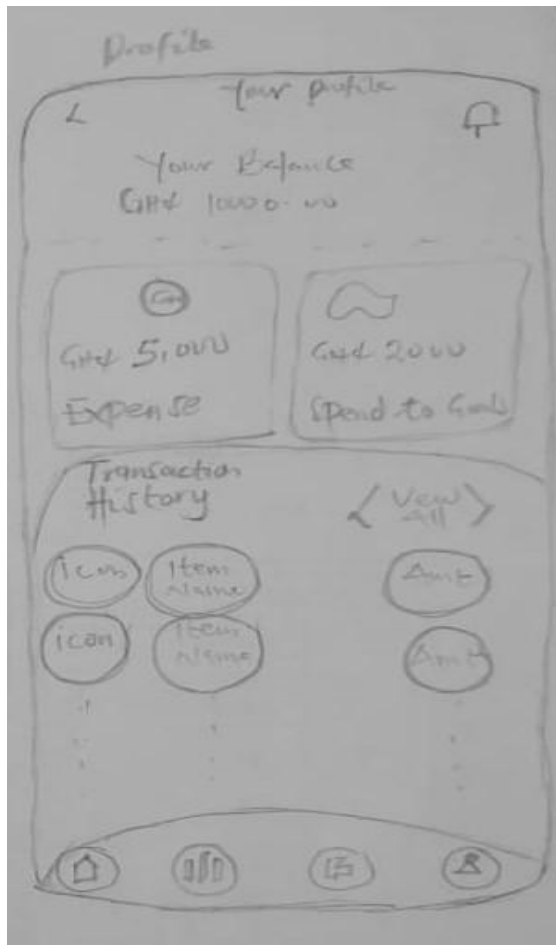

The user would be able to search any action to perform; have visual to his/her number of transactions, budget, recommendation and be able to choose payment method to make payment on transaction.

Actions for users to take.

Users can decide what they want to do now. They can either choose to view transactions, budget and choose any payment method for their transaction.

Users can also search for any action they want to perform.

Iteration 2:

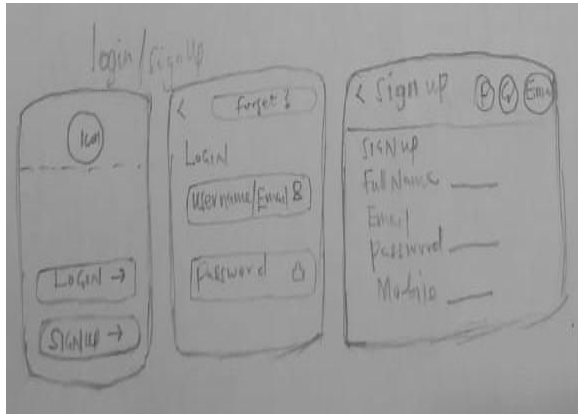

PROFILE/ACCOUNT SCREEN

Design principle(s) applied

The user would have access to view his/her

- **balance account,**
- **total expenses and**
- **also view all transaction history.**

Iteration3:

LOGIN/SIGN UP SCREEN

- Users will login with either username or email and password.
- The sign up section also takes users full name, email, password and mobile
- User authentication and encryption account.
